

Time: 3 hrs

Max. Marks: 100

Note: Answer *FIVE* full questions, selecting *ONE* full question from each *Unit*. UNIT - I

- 1. a What are initial and final conditions in networks? Why is it necessary to study these conditions in networks? Explain with a practical example.
 - In the circuit shown in Fig. 1b switch K is closed at t = 0. Find the expressions for

$$i, \frac{di}{dt}$$
 and $\frac{d^2i}{dt^2}$ all at t = 0+

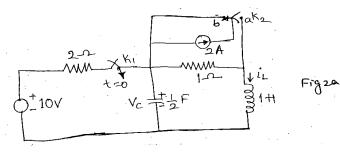

Vo = ______ C Fig 16

c. In the circuit shown in Fig. 1c, capacitor C is charged to 100 V in the polarity shown. Switch K

is closed at t = 0. Find the values of i_1 , i_2 , $\frac{di_1}{dt}$, $\frac{di_2}{dt}$, $\frac{d^2i_1}{dt^2}$, $\frac{d^2i_2}{dt^2}$ all at t = 0+. Given; $C_1 = C_2 = 1\mu F$. $R_1 = R_2 = 10 \text{ k}\Omega$.

 $\frac{10}{10}$

2 a. Find $i_L(0+); v_c(0+); \frac{dv_c(0+)}{dt} & \frac{di_L(0+)}{dt}$ for the circuit shown in Fig. 2a.

b. In the given ckt shown in Fig. 2b steady state is reached with switch K open. Switch K is closed at t = 0. Find the voltage V_c across the capacitor and current i₂ through inductor at t = 0-. Also find the values of i_1 , i_2 , $\frac{di_1}{dt}$ and $\frac{di_2}{dt}$ at t = 0+.

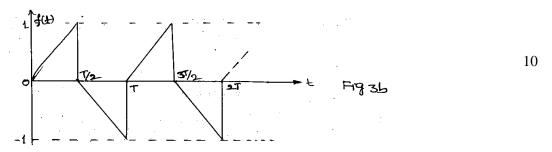

UNIT-II

3 a. Find the inverse Laplace transform of the following functions;

i)
$$F(s) = \frac{1}{s(s^2 - \theta^2)}$$
 ii) $F(s) = \frac{250}{(s+2)(s^2 + 625)}$ 10

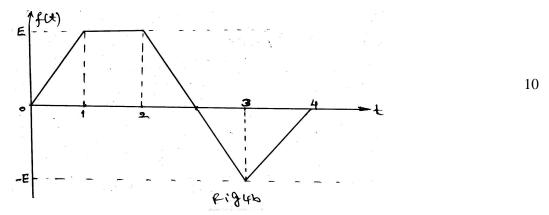

b. Find the Laplace transform of the periodic waveform shown in Fig. 3b.

4 a. In a series RLC circuit the following equation for the current is obtained. Use Laplace transform to solve the equation and find an expression for current i(t).

$$\frac{di(t)}{dt} + 3i(t) + 2\int_{0}^{t} i(t)dt + 8\delta(t) = 2e^{-3t} \text{ with } i(0-) = 4 \text{ and } 2q(0-) = 8.$$

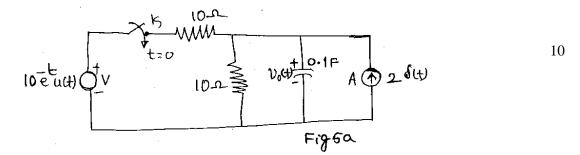

b. Find the Laplace transform of the periodic waveform shown in Fig. 4b using waveform synthesis.

P08EE45

UNIT-III

5 a. For the circuit shown in Fig. 5a, switch K is closed at t = 0. Find $V_0(t)$ using Laplace transform. Assume $V_0(0-) = 5$ volts.

b. Determine the current in the inductive branch, shown in Fig. 5b, using impulse response.

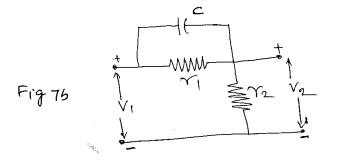

$$v(t) = + \int \mathcal{B}_{1=2,1+} Fig.5.6.$$
10
Vet - Jult Fig.5.6.

- 6. a In a series RC circuit with $R = 10 \Omega$ and $C = 50 \mu$ F, switch K is closed at t = 0 connecting a DC voltage source of 100 V to the circuit. The capacitor has an initial charge of 2 nC. Use Laplace 5 transform to find current *i*(t) through the circuit at t = 0+.
 - b. For the circuit shown in Fig. 6b determine an expression for current i(t) by Laplace transform considering initial conditions given, by writing equations in time domain.

c. If impulse response $h(t) = 2e^{-3t}u(t)$ and input $x(t) = u(t) - \delta(t)$ determine output r(t) using 10 convolution theorem and verify the same by finding inverse Laplace transform.

UNIT - IV

- 7 a. List the restrictions on locations of poles and zeros in driving point functions.
 - b. For the circuit shown in Fig. 7b find Z_{in} and voltage ratio transfer function.

Contd...4

8

P08EE45

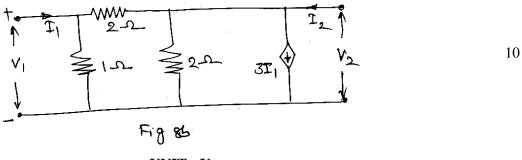

c. Obtain the z parameters for the π network shown in Fig. 7C.

8 a. Obtain the pole – zero diagram of the given function and obtain the time domain response.

$$I(s) = \frac{2s}{(s+1)(s^2+2s+4)}$$
 10

b. Determine Y parameter and hence Z parameters of the circuit shown in Fig. 8b.

9 a. Explain the properties of Hurwitz polynomial.

b. Check whether the following functions are Hurwitz polynomial.

i)
$$F(s) = s^7 + 3s^5 + s^3 + 2s$$
 ii) $F(s) = s^4 + s^3 + 3s^2 + 2s + 2$

10 a. The driving point impedance of a one port LC network is given by

$$Z(s) = \frac{(s^2 + 1)(s^2 + 3)}{s(s^2 + 2)(s^2 + 4)}$$
 obtain the first and second form of Foster network. 10

b. A driving point function is give by $F(s) = \frac{s^2 + 6s + 8}{s^2 + 4s + 3}$. Show that the function can be realized in 10

both cauer RC and RL forms.
