U.S.N					

## P.E.S. College of Engineering, Mandya - 571 401

(An Autonomous Institution affiliated to VTU, Belgaum)

## Seventh Semester, B.E. - Electrical and Electronics Engineering Semester End Examination; Dec - 2016/Jan - 2017 High Voltage Engineering

Time: 3 hrs Max. Marks: 100

Note: Answer FIVE full questions, selecting ONE full question from each unit.

## UNIT - I

. List out the applications of high voltage.	5
Explain primary and secondary ionization processes in gaseous dielectrics.	10
What is a non uniform field? Discuss breakdown in non uniform field.	5
. Explain streamer theory of breakdown in gases.	10
Explain the thermal breakdown in solid dielectric.	5
Explain cavity breakdown in liquid dielectric field.	5
UNIT - II	
What is the need for cascading of transformers?	5
Explain the working of Tesla Coil.	7
Explain the Cockcroft-Walton type high voltage DC set.	8
Explain a series resonant circuit.	7
Explain voltage doubler circuit.	7
Define rippler regulation and optimum number of stages.	6
UNIT - III	
Define standard lighting and switching impulse voltage. Draw the waveforms.	6
Explain multi stage Marx impulse generator.	8
An impulse generator has 8 stages with each capacitor rated for 0.16 µF, 125 kV. The load	
capacitor is 1000 pF. Find series resistance and damping resistance to produce 1.2/50 impulse	6
wave.	
How do you generate switching surges? Explain.	7
Explain working of a trigatron gap.	7
An impulse current generator has a total capacitance of 8 $\mu F$ . The charging voltage is 25 kV.	
If generator has to supply an output current of 10 kA with 8/20 μs waveform, determine;	_
i) Circuit inductance	6
ii) Dynamic resistance of circuit.	
	Explain primary and secondary ionization processes in gaseous dielectrics.  What is a non uniform field? Discuss breakdown in non uniform field.  Explain streamer theory of breakdown in gases.  Explain the thermal breakdown in solid dielectric.  Explain cavity breakdown in liquid dielectric field.  UNIT - II  What is the need for cascading of transformers?  Explain the working of Tesla Coil.  Explain the Cockcroft-Walton type high voltage DC set.  Explain a series resonant circuit.  Explain voltage doubler circuit.  Define rippler regulation and optimum number of stages.  UNIT - III  Define standard lighting and switching impulse voltage. Draw the waveforms.  Explain multi stage Marx impulse generator.  An impulse generator has 8 stages with each capacitor rated for 0.16 μF, 125 kV. The load capacitor is 1000 pF. Find series resistance and damping resistance to produce 1.2/50 impulse wave.  How do you generate switching surges? Explain.  Explain working of a trigatron gap.  An impulse current generator has a total capacitance of 8 μF. The charging voltage is 25 kV. If generator has to supply an output current of 10 kA with 8/20 μs waveform, determine; i) Circuit inductance

## UNIT - IV

7 a. Explain with a neat diagram the working of electrostatic voltmeter. Mention its limitations.	10		
b. Explain working of Resistance divider. What are its limitations?			
c. Write a note on Klydano graph.	4		
8 a. Explain standard sphere gap measurements for impulse voltage. Discuss on limitations of such a			
method.	10		
b. Explain the working of capacitance divider.	6		
c. Write a note on generating voltmeter.			
UNIT - V			
9 a. What is dielectric loss? Explain.	4		
b. Explain high voltage schering bridge.	8		
c. Explain tests on circuit breaker.	8		
10 a. What is the need for discharge detection? Explain.	4		
b. Explain straight detection method of discharge detection.	8		
c. Explain tests on Insulators.	8
