## P.E.S. College of Engineering, Mandya - 571401

(An Autonomous Institution affiliated to VTU, Belagavi)
First Semester, M. Tech - Civil Engineering (MCAD)
Semester End Examination; Jan. - 2020
Reliability Analysis and Design of Structural Elements
Time: 3 hrs
Max. Marks: 100
Note: i) Answer FIVE full questions, selecting ONE full question from each unit.
ii) Use of statistical table is allowed.
iii) Missing data, if any, may be suitable assumed.

## UNIT - I

1 a. The compressive strength in $\mathrm{N} / \mathrm{mm}^{2}$ of 20 concrete cubes from a building project is as follows: Find range, mean, variance and standard deviation.

| 17.24 | 19.73 | 17.60 | 19.85 | 21.42 | 13.60 | 13.96 | 13.87 | 15.65 | 13.96 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 16.18 | 17.24 | 18.76 | 20.07 | 22.31 | 14.98 | 15.64 | 15.75 | 16.27 | 15.58 |

b. Following are the results obtained in an experiment. Calculate mean, standard deviation and coefficient of variation. Plot a histogram. Determine the chance of getting a value;
i) Less a than 6
ii) Between 12 and 18
iii) Greater than 24

| 2 | 7 | 9 | 10 | 20 | 21 | 22 | 13 | 14 | 13 | 19 | 26 | 28 | 15 | 16 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

2 a. The cube strength of concrete $X$ follows the normal distribution with parameter $\mu_{\mathrm{x}}=30 \mathrm{~N} / \mathrm{mm}^{2}$ and $\sigma_{x}=4 \mathrm{~N} / \mathrm{mm}^{2}$. Calculate the probability of getting a value for a strength,
i) Less than $40 \mathrm{~N} / \mathrm{mm}^{2}$
ii) Greater than $25 \mathrm{~N} / \mathrm{mm}^{2}$
b. The compressive strength Y of $\mathrm{M}_{15}$ concrete follows the $\log$ normal distribution. It is given that $\mu_{\mathrm{y}}=24.04 \mathrm{~N} / \mathrm{mm}^{2}, \sigma_{\mathrm{y}}=5.76 \mathrm{~N} / \mathrm{mm}^{2}$. Determine the probability of getting strength less than the specified value of $15 \mathrm{~N} / \mathrm{mm}^{2}$.

## UNIT - II

3 a . Fit a straight line to the following data:

| $x$ | 71 | 68 | 73 | 69 | 67 | 65 | 66 | 67 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $y$ | 69 | 72 | 70 | 70 | 68 | 67 | 68 | 64 |

b. For the data given below, find the equation to the best fitting exponential curve of the form $y=a e^{b x}$.

| $x$ | 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $y$ | 1.6 | 4.5 | 13.8 | 40.2 | 125 | 300 |

4 a . List the properties of correlation coefficient.
b. Write a note on skewness and kurtosis.
c. The field data of soil samples collected from various depths is given below. Obtain the correlation coefficient between the depth and soil shear strength.

| Depth $(\mathrm{m})$ | 2 | 3 | 4 | 5 | 6 | 7 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Shear Strength $\left(\mathrm{kN} / \mathrm{m}^{2}\right)$ | 14.8 | 20.3 | 32.2 | 39.0 | 42.0 | 56.2 |

## UNIT - III

5 a . A tension member of a steel truss is subjected to an axial load Q . The strength of the member is given by $f_{y}$. $A$, where $f_{y}$ is the yield strength of steel and $A$ is the area of cross section of the member given, $\mu_{\mathrm{Q}}=30 \mathrm{kN}, \quad \delta_{\mathrm{Q}}=0.4, \quad \mu_{\mathrm{fy}}=280 \mathrm{~N} / \mathrm{mm}^{2}, \quad \delta_{\mathrm{fy}}=0.2$ Find the area of the member for the specified reliability of 0.99865 . Neglect the variation in area.
b. A simply supported beam of span ' $l$ ' is subjected to a uniformly distributed load of ' $\omega$ ' $\mathrm{kN} / \mathrm{m}$ throughout the span. Establish the statistics of maximum deflection.

Given; $l=\mathrm{N}(4.3 .0 .35) \mathrm{m}, \quad \omega=\mathrm{N}(32,2.6) \mathrm{kN} / \mathrm{m}$

$$
\mathrm{E}=\mathrm{N}\left(2 \times 10^{5}, 0.2 \times 10^{5}\right) \mathrm{N} / \mathrm{mm}^{2} \quad \mathrm{I}=\mathrm{N}\left(4.5 \times 10^{7}, 230 \times 10^{6}\right) \mathrm{mm}^{4}
$$

6 a. It is assumed that the strength of a RCC column is given by the sum of the strengths of concrete $f_{c k}$ and reinforcing bars $f_{y}, f_{c k}$ and $f_{y}$ follows normal distributions with parameters given by,

$$
\mu_{\mathrm{fck}}=29 \mathrm{~N} / \mathrm{mm}^{2} \quad \sigma_{\mathrm{fck}}=5 \mathrm{~N} / \mathrm{mm}^{2} \quad \mu_{\mathrm{fy}}=460 \mathrm{~N} / \mathrm{mm}^{2} \quad \sigma_{\mathrm{fy}}=46 \mathrm{~N} / \mathrm{mm}^{2}
$$

If the size of the column is $250 \mathrm{~mm} \times 400 \mathrm{~mm}$ and if it is provided with four bars of 20 mm diameter, determine the mean value and standard deviation of the strength of the column. The column is subjected to a dead load D and live load L with distributions $\mathrm{N}(1500,200) \mathrm{kN}$ and $\mathrm{N}(500,200) \mathrm{kN}$ respectively. Compute the reliability of the column.
b. The strength of a column is given by $R=\frac{\pi^{2} E I}{a^{2}}$

$$
\begin{array}{rll}
\text { Given; } \mu_{\mathrm{E}} & =2.03 \times 10^{5} \mathrm{~N} / \mathrm{mm}^{2} & \text { and } \\
\mu_{\mathrm{I}} & =12.5 \times 10^{6} \mathrm{~mm}^{4} & \text { and } \\
\mu_{\mathrm{E}}=5000 \mathrm{~mm} & \delta_{\mathrm{I}}=0.1 \\
\mu_{\mathrm{Q}}=700 \mathrm{kN} & \text { and } & \delta_{\mathrm{a}}=0.05 \\
& \text { and } & \delta_{\mathrm{q}}=0.3
\end{array}
$$

Where Q is the total load on the column. All the variables are $\log$ normally distributed. Determine the probability of failure and reliability of the column.

## UNIT - IV

7. Determine the reliability index for a steel tension member having tensile strength $R$. Subjected to a tensile load $Q$ by FOSM method. The safety margin is given by,
i) $M=\frac{\pi D^{2}}{4}-\frac{Q}{R}$
ii) $M=D-2 \sqrt{\frac{Q}{\pi R}}$

All the variables are normally distributed.

Given; $\mu_{\mathrm{R}}=280 \mathrm{~N} / \mathrm{mm}^{2}$

$$
\begin{array}{ll}
\mu_{\mathrm{Q}}=5000 \mathrm{~N} & \sigma_{\mathrm{Q}}=2000 \mathrm{~N} \\
\mu_{\mathrm{D}}=6 \mathrm{~mm} & \sigma_{\mathrm{D}}=0.6 \mathrm{~mm}
\end{array}
$$

8. Determine the reliability index by AFOSM method for a simple supported I beam in the limit state of shear. The beam carries a point load ' Q ' at mid span. All the variables are normally distributed.

$$
\begin{array}{ll}
\mu_{\mathrm{Q}}=4000 \mathrm{~N} & \sigma_{\mathrm{Q}}=1000 \mathrm{~N} \\
\mu_{\mathrm{FS}}=95 \mathrm{~N} / \mathrm{mm}^{2} & \sigma_{\mathrm{FS}}=10 \mathrm{~N} / \mathrm{mm}^{2} \\
\mu_{\mathrm{D}}=50 \mathrm{~mm} & \sigma_{\mathrm{D}}=2.5 \mathrm{~mm} \\
\mu_{\mathrm{tw}}=1.25 \mathrm{~mm} & \sigma_{\mathrm{tw}}=0
\end{array}
$$

## UNIT - V

9. Determine the reliability index by AFOSM method for a steel member having tensile stress $R$ subjected to a tensile load $Q$. The failure function is given by, $R-\frac{4 Q}{\pi D^{2}}=0$

Given;

$$
\begin{aligned}
& \mathrm{R}=\mathrm{N}(280,28) \mathrm{N} / \mathrm{mm}^{2} \\
& \mathrm{Q}=\mathrm{N}(5000,2000) \mathrm{N} \\
& \mathrm{D}=\mathrm{N}(6,0.6) \mathrm{mm}
\end{aligned}
$$

10. The strength of an axially loaded short column is given by $R=0.67 C A_{c}+A_{s .} F$

Where $C$ is the cube strength of concrete, $F$ is the yield strength of reinforcing bars, $A_{C}$ is the area of concrete and $A s$ is the area of steel.

Given;

$$
\begin{array}{ll}
\mathrm{C}=\mathrm{N}(19.54,4.1) \mathrm{N} / \mathrm{mm}^{2} & \mathrm{~F}=\mathrm{N}(469,46.9) \mathrm{N} / \mathrm{mm}^{2} \\
\mathrm{~A}_{\mathrm{c}}=125000 \mathrm{~mm}^{2} & \mathrm{~A}_{\mathrm{s}}=1250 \mathrm{~mm}^{2}
\end{array}
$$

Generate the statistics of R ( 10 values). Compare the values with the theoretical values and find the percentage error.
