The Students will be able to:

CO1: Apply the knowledge of Science and Geology to estimate Engineering properties of soil.

CO2: Prepare the flow nets for soil structures.

CO3: Analyze earth pressure and stability of slopes for design of earth Retaining structures.

CO4: Evaluate and interpret bearing capacity and settlement data for design of footings.

Note: I) PART - A is compulsory. Two marks for each question.

II) PART - B: Answer any <u>Two</u> sub questions (from a, b, c) for Maximum of 18 marks from each unit.

| Q. No. | Questions<br>I : PART - A   | Marks<br>10 | BLs | COs | POs   |
|--------|---|-------------|-----|-----|-------|
| I a.   | Explain types of samplers used for soil samplers.   | 2           | L1  | CO1 | PO1   |
| b.     | Explain assumptions and limitations of Laplace equation.  | 2           | L1  | CO2 | PO1   |
| с.     | Differentiate active and passive earth pressure.  | 2           | L1  | CO3 | PO1   |
| d.     | List the types of slopes.   | 2           | L1  | CO3 | PO1   |
| e.     | Define ultimate, net and safe bearing capacities.   | 2           | L1  | CO4 | PO1   |
|        | II : PART - B   | 90          |     |     |       |
| 1 .    | UNIT - I  | 18          |     |     |       |
| 1 a.   | Explain the objectives of soil exploration program. Explain electric resistivity method with neat sketch.                       | 9           | L2  | CO1 | PO1   |
| b.     | Explain determination of ground water table by Hvorselev's method,  | 9           | L2  | CO1 | PO1   |
|        | with a neat sketch.   |             |     |     |       |
| c.     | Explain methods to stabilize the borehole. Also, write borelog presentation.  | 9           | L2  | CO1 | PO1   |
|        | UNIT - II   | 18          |     |     |       |
| 2 a.   | Explain determination of vertical stress using Newmark's method.  | 9           | L2  | CO2 | PO1,2 |
| b.     | A rectangular foundation, 2 m $\times$ 4 m transmits a uniform pressure   |             |     |     |       |
|        | 450 $kN/m^2$ to underlying soil. Determine the vertical stress at depth   |             |     |     |       |
|        | 1 meter below the foundation at a point within loaded area, 1 meter   | 9           | L2  | CO2 | PO1,2 |
|        | away from short edge and 0.5 meter away from a long edge. Use   |             |     |     |       |
|        | Bousinique's theory.  |             |     |     |       |
| с.     | List and explain characteristics and uses of flow nets. Also, explain method to determine the phreatic line in the earthen dam. | 9           | L2  | CO2 | PO1,2 |

| P18CV73 |  |    | P   | age No 2   |
|---------|--|----|-----|------------|
|         | UNIT - III   | 18 |     |            |
| 3 a.    | A 6 m high retaining wall is to support a soil with unit                                 |    |     |            |
|         | weight $\gamma = 17.4 \ kN \ m^3$ , soil friction angle $\phi' = 26^\circ$ and cohesion, |    |     |            |
|         | $C = 5 \text{ kN/m}^2$ . Determine the Rankine active force per unit length of the       | 9  | L2  | CO3 PO1,4  |
|         | wall both before and after the tensile crack occurs, and determine the                   |    |     |            |
|         | line of action of the resultant in both cases.   |    |     |            |
| b.      | Explain Coulumb's passive earth pressure theory with neat sketch.                        | 9  | L2  | CO3 PO1,4  |
| c.      | Explain Culmann's graphical method to find active earth pressure,                        | 0  | 1.0 |            |
|         | with neat sketch.  | 9  | L2  | CO3 PO1,4  |
|         | UNIT - IV  |    |     |            |
| 4 a.    | List and explain various causes for slope failures. Also, explain                        | 9  | L2  | CO3 PO1,2  |
|         | stability analysis of finite slope by method of slices.                                  |    |     | 000 101,2  |
| b.      | b. A new canal is excavated to a depth of 5 m below the ground level                     |    |     |            |
|         | through a soil tracing the following conditions,   |    |     |            |
|         | $C' = 15 \text{ kN/m}^2, \phi' = 15^\circ, e = 0.80, G = 2.70$                           |    | L2  | CO3 PO1,2  |
|         | The slope of canal is lies. Calculate the factor of safety with respect to               |    | L2  | 005 101,2  |
|         | cohesion, when canal runs full ( $S_n = 0.083$ ), if it is completely emptied            |    |     |            |
|         | what will be the factor of safety ( $S_n = 0.122$ ).                                     |    |     |            |
| c.      | Explain stability of slope by friction circle method.                                    | 9  | L2  | CO3 PO1,2  |
|         | UNIT - V   |    |     |            |
| 5 a.    | Explain effect of ground water table on the bearing capacity of soil                     | 9  | L2  | CO4 PO1, 2 |
|         | with neat sketches.  |    |     |            |
| b.      | For a continuous footing, gross allowable load per unit area $(q_{all})$ that            |    |     |            |
|         | the footing can carry. Assume general shear failure.                                     |    |     |            |
|         | Given: $\gamma = 19 \text{ kN/m}^3$ ; $c' = 31 \text{ kN/m}^2$ ; $\phi' = 28^\circ$      | 9  | L3  | CO4 PO1.2  |
|         | $D_f = 1.5 \text{ m};$ $B = 2 \text{ m};$ $Fos = 3.5$                                    |    |     |            |
|         | Use, $N_c = 31.61;$ $N_g = 17.81;$ $N_{\gamma} = 13.70$                                  |    |     |            |
| c.      | Explain standard penetration test with neat sketch.                                      | 9  | L2  | CO4 PO1.2  |
|         |  |    |     |            |
