| | U.S.N | | | | | | | | |
|--|---|--------|-----|--------|-----|--|--|--|--|
| Time: | P.E.S. College of Engineering, Mandya - 5' (An Autonomous Institution affiliated to VTU, Belagavi, Fourth Semester, B.E Automobile Engineerin Semester End Examination; August - 2023 Automotive Engines and Components |) g | | Iarks: | 100 | | | | |
| The S | tudents will be able to: | | | | | | | | |
| CO1: Classify Heat engine and Analyze actual working principle of Heat engines. CO2: Analyze engine block and its auxiliaries and Determine major dimensions of the same. CO3: Analyze Piston-rings-pin and Determine major dimensions of the same. CO4: Analyze Connecting rod, crank shaft & Flywheel. Determine major dimensions of the same. CO5: Analyze valve operating mechanism and Determine major dimensions of the same. Study of engine components of state of the art technologies. | | | | | | | | | |
| <u>Note</u> : I) PART - A is compulsory. Two marks for each question. II) PART - B: Answer any <u>Two</u> sub questions (from a, b, c) for a Maximum of 18 marks from each unit. III) Use of Design Data Hand Book is permitted. | | | | | | | | | |
| Q. No. | Questions | Marks | BLs | COs | POs | | | | |
| | I : PART - A | 10 | | | | | | | |
| 1 a. | A Two stroke cycle engine as compared to a Four stroke cycle | 2 | L1 | CO1 | PO1 | | | | |
| | engine of the same size because there will be for each | 2 | LI | COI | roi | | | | |
| b. | Interiors of the engine manifolds are generally made, but more | 2 | T 1 | CO2 | PO1 | | | | |
| | of this shall increase to the mixture flow. | 2 | LI | 02 | 101 | | | | |
| c. | Two types of the rings in the piston are and | | | | | | | | |
| | and Gudgeon pin in a piston is held in position by a | 2 | L1 | CO3 | PO1 | | | | |
| | | | | | | | | | |
| d. | In a forged Connecting rod, length between and | 2 | Т 1 | CO4 | | | | | |
| | axis is the proper measurement of the Connecting rod length. | 2 | L1 | CO4 | rUl | | | | |
| e. | In a four stroke cycle engine, usually, each cylinder has a minimum of | 2 | Т 1 | 005 | | | | | |
| | and valves and a maximum of and valves. | 2 | L1 | CO5 | PUI | | | | |
| | II : PART - B | 90 | | | | | | | |
| | UNIT - I | 18 | | | | | | | |
| 2 a. | Explain with simple sketches, the ACTUAL working principle of a 4 | | | | | | | | |
| | stroke CI Engine, duly mentioning the actual valve timing diagram and | 9 | L2 | | PO1 | | | | |
| | P-V diagram. | | | CO1 | | | | | |
| b. | Explain with simple sketches, the working principle of a 2 stroke 3 port | 0 | т 1 | | | | | | |
| | engine, duly mentioning the port timing diagram and P-V diagram. | 9 | L1 | | PO1 | | | | |

| P18AU44 | | Page No 2 | | |
|---------|--|-----------|-----|---------|
| c. | Compare SI and CI Engines based on; Basic cycle, Fuel and Introduction | | | |
| | of fuel, ignition, Compression Ratio Range, Speed, Efficiency, Weight, | 9 | L2 | PO1 |
| | Combustion, Two Stroke operation, A/F Ratio, Very high power, Super | 7 | LZ | roi |
| | Charging. | | | |
| | UNIT - II | 18 | | |
| 3 a. | Explain with neat sketch, | | | |
| | i) Cylinder wear due to abrasion, erosion and corrosion | 9 | L2 | PO1 |
| | ii) Guarding Against Cylinder Distortion | | | |
| b. | Sketch and explain the following: | | | |
| | i) Separate and integral cylinder heads | 9 | L1 | CO2 PO1 |
| | ii) Dry liner and wet liner | | | |
| с. | What are the general types of Mufflers used in automobiles? Sketch and | | | |
| | explain, the construction and working of any one type of exhaust | 9 | L1 | PO1 |
| | mufflers used in an automobile | | | |
| | UNIT - III | 18 | | |
| 4 a. | What do you mean by piston slap and piston clearance? With neat | 9 | 1.2 | PO1 |
| | sketches, explain any one method each for preventing the same. | 9 | L2 | POI |
| b. | Sketch and explain about typical temperature distribution in pistons. | 9 | L2 | PO1 |
| с. | Design a cast iron piston for a single acting IC Engine from the | | | |
| | following data, Assume Missing data, if any | | | |
| | Diameter of cylinder Bore = 250mm | | | 002 |
| | Maximum explosion pressure $= 4.91$ N/mm ² | | | CO3 |
| | Permissible stress for CI Engine $= 39.24$ N/mm ² | 9 | L3 | PO1,2 |
| | Permissible stress for piston ring $= 98.1$ N/mm ² | | | |
| | Radial wall pressure $= 0.04$ N/mm ² | | | |
| | Permissible bearing pressure for pin = 19.62 N/mm ² | | | |
| | Permissible bending stress in pin $= 63.77$ N/mm ² | | | |
| | UNIT - IV | 18 | | |
| 5 a | Explain with neat sketches, | | | |
| | i) Different arrangements of connecting piston and connecting rod | 9 | L1 | PO1 |
| | ii) Construction and function of a vibration damper. | | | |
| b. | Design a connecting rod for four stroke petrol engine with the | | | CO4 |
| | following data: | 0 | 1.2 | DO1.0 |
| | Diameter of piston = 88 mm; | 9 | L3 | PO1,2 |
| | Stroke =125 mm; | | | |
| | | | | |

| P18AU44 | | | Page No 3 | | |
|---------|---|----|-----------|-----|-------|
| | Weight of reciprocating parts = 15.696 N | | | | |
| | Length of connecting rod centre to centre = 300 mm ; | | | | |
| | R.P.M. = 2200 with possible over speed of 3000 | | | | |
| | Compression ratio = $6.8:1$, | | | | |
| | Probable maximum explosion pressure (assumed shortly after dead | | | | |
| | centre, say when, $=3^{\circ}$) = 3.4335 N/mm ² | | | | |
| | Assume any further data required for the design. | | | | |
| с | A force of 117.720kN acts tangentially on the crankpin of an overhang | | | | |
| | crank. The axial distance between the centre of the crankshaft journal | | | | |
| | and the crankpin is 400 mm and the crank is 500 mm long. Determine, | | | | |
| | (i) Diameter and length of the crankpin journal, | 9 | L3 | | PO1,2 |
| | (ii) Diameter of the shaft journal, from the following data: | | | | |
| | Safe bearing pressure = 5.91 N/mm ² | | | | |
| | Bending stress = 63.77 N/mm ² | | | | |
| | Principal stress in the shaft journal = 63.77 N/mm ² | | | | |
| | UNIT - V | 18 | | | |
| 6 a. | Classify Mechanisms with side camshaft and and Mechanisms with | 9 | L1 | | PO1 |
| | overhead camshaft. Sketch and briefly explain any one in each group. | | 21 | | |
| b. | Explain with sketch, the different Camshaft drives along with their | 9 | L1 | CO5 | PO1 |
| | limitations and benefits. | | | | |
| c. | Why is the Morse test not suitable for a single cylinder engine? Describe | 9 | L1 | | PO1 |
| | the method of finding friction power using Morse test? | - | | | - |
